

Introduction

Congratulations on your purchase of a table with the So Sound[®] System. The following pages of this user guide will will inform you how to set up and use this system.

So Sound Amp Operating Instructions

The So Sound Amp is the proprietary amplifier used to power your So SoundHearts. It has been specially designed to work with almost any musical device, and to deliver the deep, resonating tones and harmonies that are so beneficial to a relaxing experience.

Never force the connection between your phone/music player and the So Sound Amp. The correct cable connection is standard on most devices, should never require forced pressure to complete.

Volume/Resonance Control

The resonance knob should not have to be more than half way (11-12:00 o'clock position) or distortion will be a problem. The status light will turn green when the system is in distortion and you will hear a popping sound.

Using a Phone or Player

If you want to use a phone or another player, plug in the 3.5mm male-male cable into the headphone output of your phone and plug in the other end into the front of the amp labeled IN.

Care & Safety

Since the So Sound® System uses magnets in the So SoundHearts, people with pacemakers or any other implanted magnetically-sensitive medical device should consult with their doctor before lying on a table with this system.

The So Sound Table and components has no user-serviceable parts. Never attempt to open or repair the So Sound System.

Your So Sound® System has been designed to give you years of sound rest and relaxation. However, care should be taken to keep the volume levels of the So SoundHearts at “normal” levels. Turning up the vibration (resonance) levels too high for extended periods of time will create distortion and could damage the performance of the system.

The So SoundHearts have been equipped with thermal switches that will automatically decrease the vibration (resonance) levels of the table if they are continuously running at high volumes for extended periods of time. If your So Sound table decreases in volume, simply turn off the power on the So Sound Amp, and let the system cool down for twenty minutes. The system should return to normal once you turn it back on.

Protect your hearing when using headphones by:

- Limiting the amount of time you use headphones at high volumes
- Avoid turning the volume up to block out background noise
- Turn the volume down if you can't hear people speaking to you

Frequently Asked Questions

1. Can I use my own ipod, iPhone or other music player?

Yes, you can use any audio source that has a Stereo jack (standard with all players/phones – headphone output), (a cable to connect is supplied with the So Sound ART package. But due to different output levels, some devices may have a higher quality output than others.

2. Can I buy more music that works with the So Sound System?

Yes, while any music can be used. Some will resonate better than others. So Sound Solutions offers music that is specifically designed to provide an enhanced experience. Please visit www.sosoundsolutions.com to explore additional music and program offerings.

3. Can I play any music that I want?

Yes, you can relax, fall asleep, and wake up to any music you like. We have included a USB to have some music that works well on the table. We do encourage people to try out different types of music and let us know what works!

4. I'm pregnant, should I take any additional precautions?

Some types of music have been proven to be of tremendous value to developing babies, but since sound waves travel faster and louder through liquids, we recommend that volume levels on the So SoundHearts be kept very low, and used for shorter periods of time.

5. Is there any risk of fire from the electrical components?

No. The So SoundHearts and Amp have been rigorously tested through hundreds of hours of use. But just like any electrical device, care should be taken to avoid damaging the wires, and the components should NEVER be opened.

6. How do I get more music from So Sound?

Simply visit www.sosoundsolutions.com and purchase your favorite CDs.

Troubleshooting

1. Basic Troubleshooting

- Ensure that the music source's volume is turned up and mute is not enabled.
- If you have an internal equalizer on your musical device, ensure that the balance is set equally between Left and Right,
- Ensure that your mp3 player or music source is plugged into the "INPUT" socket on the front of the So Sound Amp (see section, figure image)

2. I can't feel the So SoundHearts

- Adjust the left knob on the left side of the Amp to control the vibration levels of the So SoundHearts.
- Check to see if the blue light is on (front of amp).
- If you have the 3.5mm cable plugged in, you will not hear anything from the USB. Unplug the cable to hear the music on the USB.

3. I can only feel the So SoundHearts on one side of the bed

- Check that the balance of your musical device is balanced equally between left and right, and forward and backward if applicable

4. I can't hear anything out of my external speakers or headphones

- Adjust the right knob on the right of the Amp to control headphone or external speaker volume
- Adjust the volume of your external speakers
- Check that the balance of your musical device is balanced equally between left and right.

5. I can hear music through my headphones or speakers, but the vibration from the table is very weak or distorted

- The bonus music that came with your So Sound Table was specially created to resonate with the So SoundHearts within the platform. Due to different levels of studio production and recording quality, some music that may "sound" good, may not "resonate" as well out of the So SoundHearts. But don't be dismayed, you may find that music that you may not normally "listen" to, feels unbelievable when coming through the So SoundHearts.
- Check that the balance of your musical device is balanced equally between left and right, and forward and backward if applicable
- Adjust the resonance with the left knob on the So Sound Amp
- Try using a non MP3 format. Try using the standard to all Cds (.wav) or a non-compressed audio format.
- Make sure the output from your player is on high (about 8 out of 10) but not so much as to distort the sound.

Warranty

So Sound Hearts and Amp – 1 (One) Year Limited

The Touch by So Sound and So Sound components are not user-serviceable. Opening either the Touch by So Sound or any of the So Sound components voids all warranties
